GOD BASED MAGNETISM

(entire collection of Michael S. Green's writings)

E=M

Michael S. Green (transcribed by: Jackson B.)

Chapter 1

E=M

E=M. Where E is energy and M is magnetism. There are two kinds of magnetism, that of GOD and that of man. GOD's magnetism is based on the interaction of three kinds of individual particles. These particles make up and operate all matter and all life in the universe. When GOD said "let there be light" (GEN. 1:3), these particles came forth from HIS glorified body. Then GOD created the sun, from which these particles emanate in the form of sunbeams. The particles are the individual north pole magnet, the individual south pole magnet, and the neutral particle (of matter).

The core of the earth is a solid iron ball which attracts individual north and south pole magnets that make up the magnetic poles and magnetic field. The earth's magnetic poles and field are magnetically balanced at all times. This is maintained by an equal number of individual north pole magnets and individual south pole magnets being pulled toward and pushed from the earth's magnetic field. Some magnets are thrown out of the magnetic field by centrifugal force, never to return. Sunbeams strike the earth continuously, delivering a steady supply of magnets. The earth itself does not produce any magnets or any neutral particles (of matter).

The earth is held in place and together by it's two magnetic poles. The magnetic force of the poles is equal and cancels each other out. "HE suspends the earth over nothing" (JOB 26:7).

Transcriber's note: I have kept the format, capitalization, and paragraph style as close to the original as possible. The diagrams have been redone, but no meaning has been lost in the transformation.

Chapter 2
MAGNETS AND MAGNETISM

The earth itself is a magnet with a north magnetic pole and a south magnetic pole. The individual north and south pole magnets, in equal numbers, continuously maintain the magnetic balance of earth's magnetic field. Metal and rock that come from the earth become magnetized when individual north and south pole magnets flow through and circulate around them. In all metal magnets, one end is the north pole magnet and the other end is the south pole magnet. Magnets without an end or round, have on side that is the north pole magnet and the other side is the south pole magnet.

Magnetism consists of two separate magnetic forces, that of the north pole magnet and that of the south pole magnet. The north pole magnet is made up [of] individual north pole magnets. The south pole magnet is made up of individual south pole magnets.

Chapter 3
THE THREE KINDS OF INDIVIDUAL PARTICLES

The three kinds of individual particles are the individual north pole magnet, the individual south pole magnet[,] and the individual neutral particle (of matter). Individual magnets of the same kind repel each other while opposite kinds of magnets attract each other. Individual north and south pole magnets share many characteristics and properties. Both have perpetual power, but is very weak. For greater power, larger quantities of magnets are necessary. Both constantly circulate from one magnetic pole to the opposite magnetic pole, always moving or rotating.

Individual north and south pole magnets are indestructible. Matter can be “destroyed”, the magnets are “liberated” to return to the general circulation (the earth's magnetic field).

Each kind of individual magnet is smaller than a particle of light. Magnets pass through everything. Magnets encounter resistance constantly. When passing through dry, open air they encounter more resistance than when passing through something of matter. (see “GOD BASED MAGNETISM”).

The individual neutral particle (of matter) is the least understood of the three kinds of individual particles. It is usually considered the common core of an atom. It is believed to have some characteristics and properties of an individual north or south pole magnet. For example, all three kinds of individual particles are the same shape (round) and size. The individual neutral particle (of matter), however, has no magnetic charge or force. This particle has no attraction to the earth's iron ball core and is not affected by centrifugal force.

Chapter4
NORTH POLE MAGNETIC CURRENT AND SOUTH POLE MAGNETIC CURRENT

A magnetic current is a flow of concentrated individual north and south pole magnets. North pole magnetic current is separate from south pole magnetic current. It takes large quantities of individual north and south pole magnets to create a north or a south pole magnetic current.

When these two magnetic currents run against each other, they do so in concentrated streams of individual north and south pole magnets. One concentrated stream weaves itself around the other, without touching. Together these streams spin in a right hand twist at great speed, while moving in straight lines. Neither magnetic current can run on it's own without the other magnetic current running opposite or against it.

In a battery, for example, the individual north and south pole magnets come out of the positive and negative terminals, respectively. The magnets come out when the opposite magnets are attracted to their terminals or when the battery is connected to a device. The magnets accumulate at their respective terminals when the battery is disconnected.

Chapter 5
THE RUNNING OF MAGNETIC CURRENTS

When one magnetic current runs against the other magnetic current, the individual north and south pole magnets are attracted to each other. When magnets of the same kind align, they are repellent, pushing each other forward in the same direction. The force of the attraction is equal to the force of repulsion of each magnet. The equal magnetic forces cancel each other out as seen in Fig. 5.

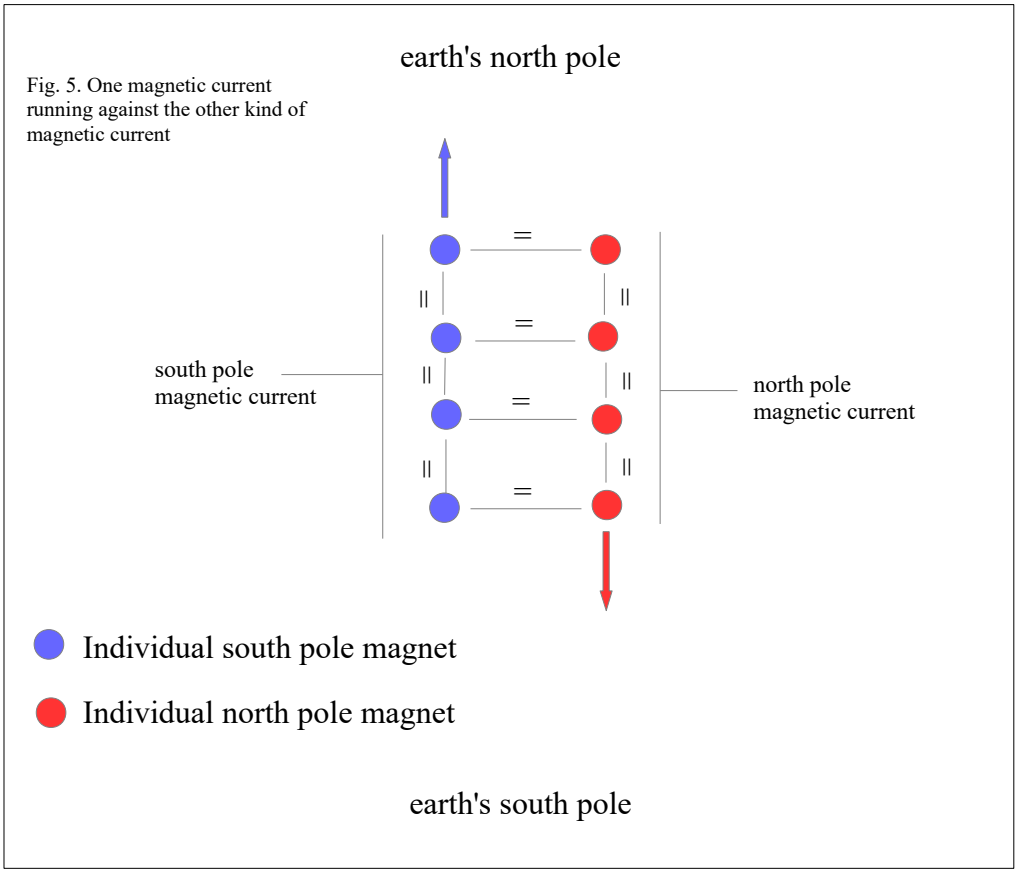

Fig. 5. One magnetic current running against the other kind of magnetic current

Chapter 6
THE ATOM

The atom is composed of three kinds of individual particles. Atoms are created when individual north and south pole magnets orbit around a common core. As in Fig. 6.1 the individual neutral particle (of matter) is always the common core. The magnets move at great speeds. Centrifugal force pushes the magnets outward, while the magnets are pulled inward by the two equal opposing forces of magnetism. The interaction of these forces maintains the atom's integrity (see Fig. 6.2).

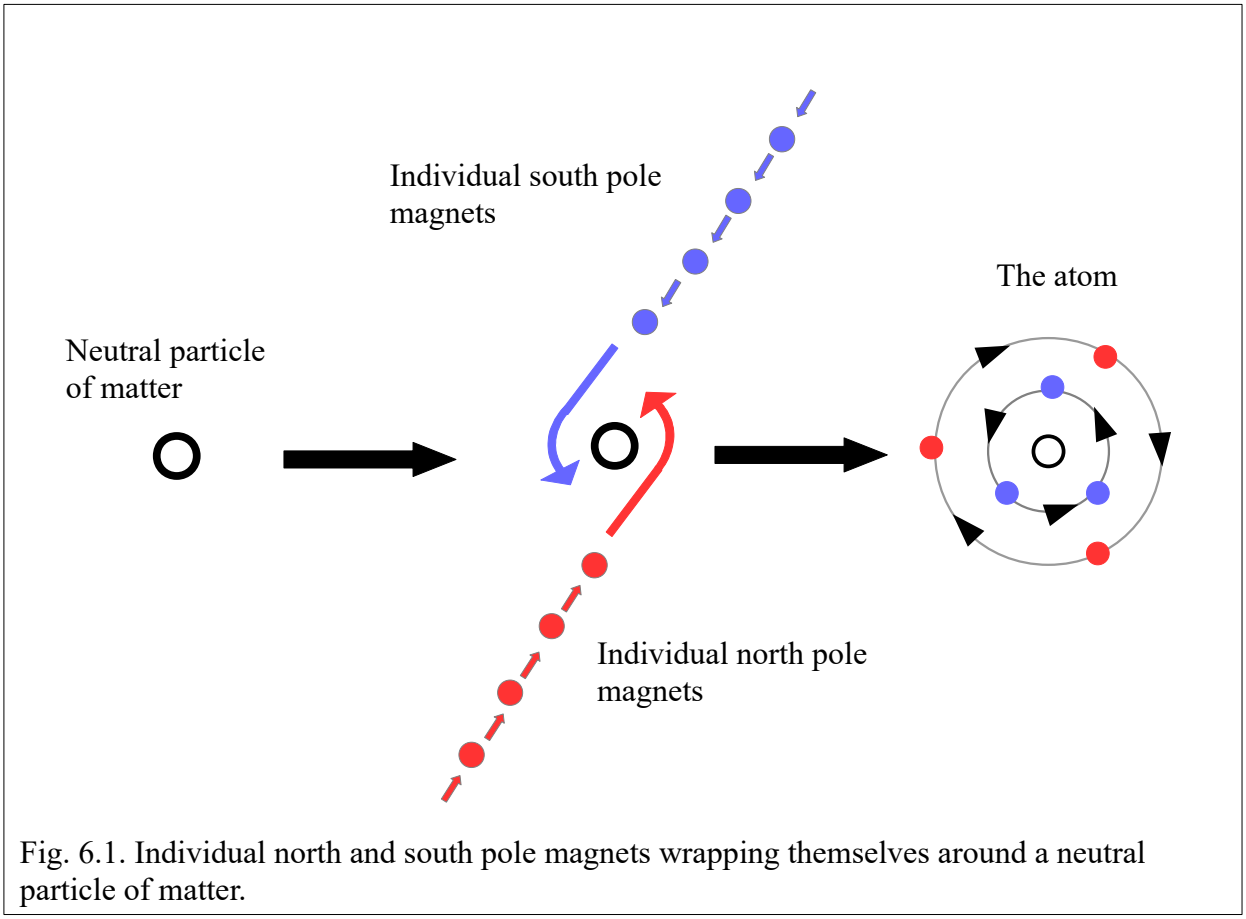

Fig. 6.1. Individual north and south pole magnets wrapping themselves around a neutral particle of matter.

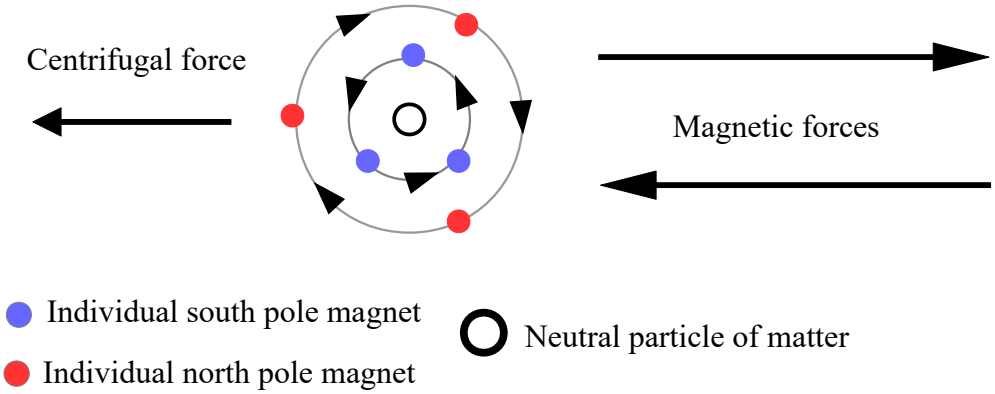
Fig. 6.2. The three equal opposing forces of an atom



All matter is made up of atoms. The size of the atom is determined by the number of magnets orbiting the common core. Small atoms are pulled toward larger atoms. The magnets that orbit smaller atom strike the magnets orbiting the larger atom. With a flash of light, a single magnet is struck off the larger atom. This continues until the larger atom is depleted of all it's magnets and it's common core, the individual neutral particle (of matter) is release. A new atom is formed as the smaller atom incorporates all the orbiting magnets (see Fig. .3).

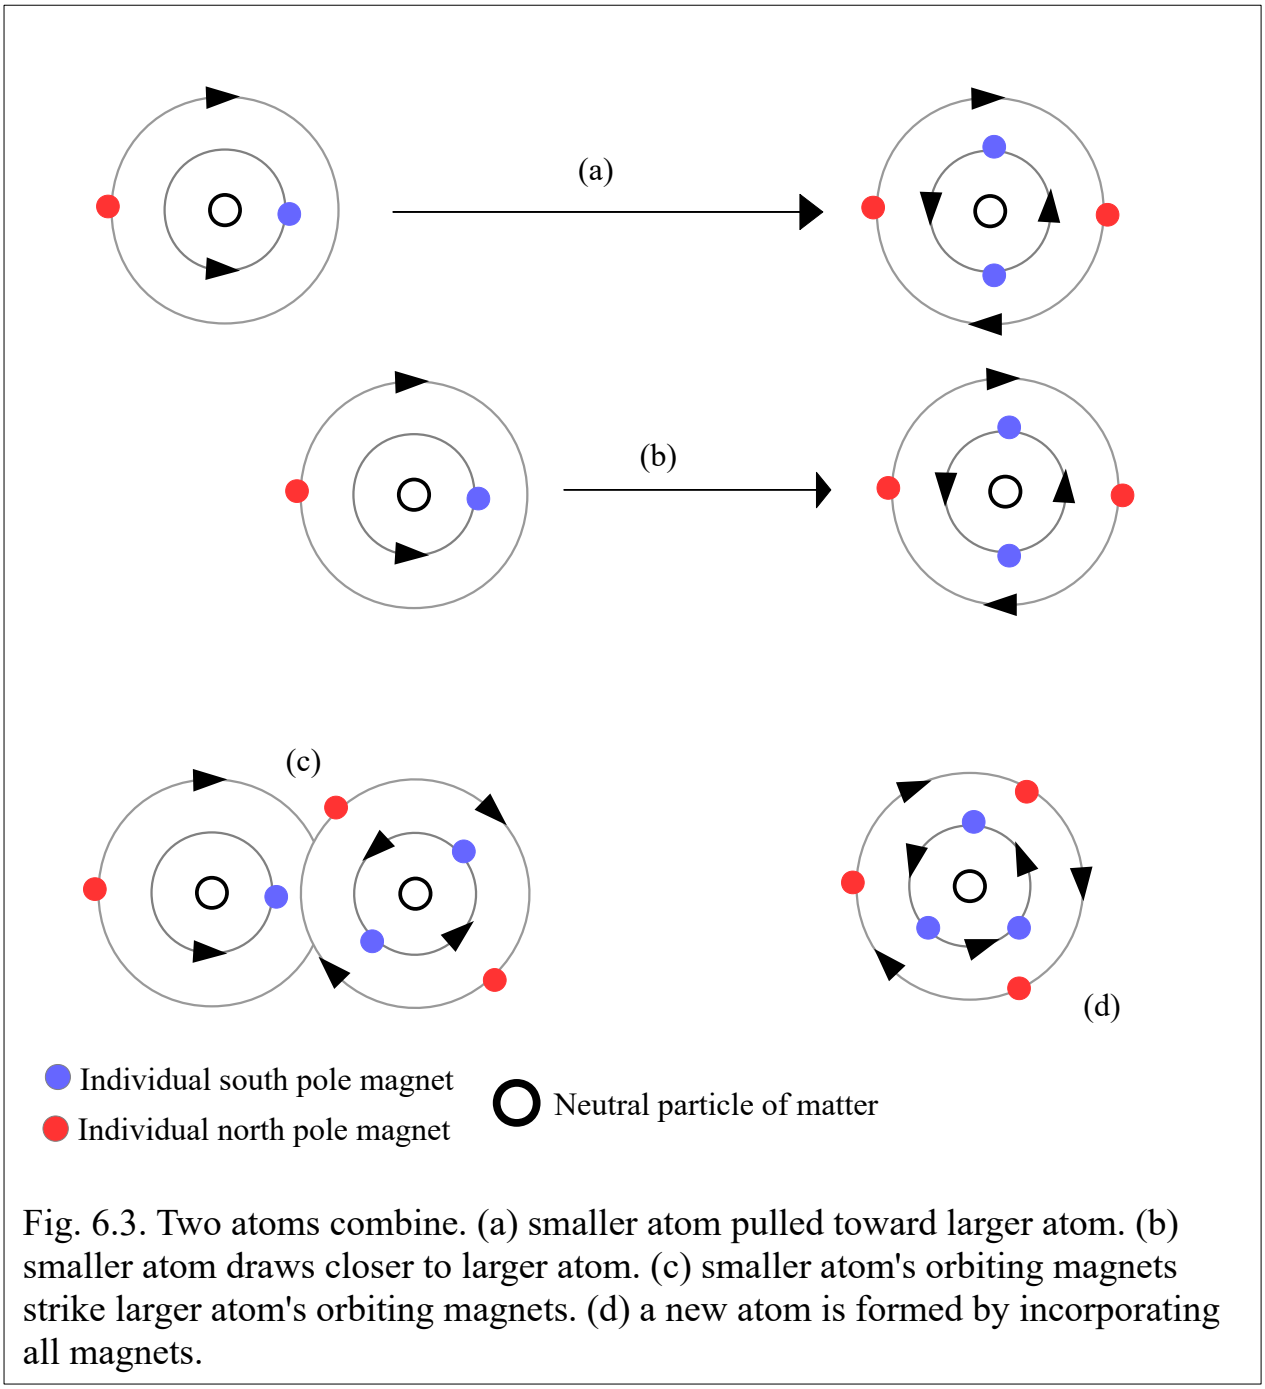


Fig. 6.3. Two atoms combine. (a) smaller atom pulled toward larger atom. (b) smaller atom draws closer to larger atom. (c) smaller atom's orbiting magnets strike larger atom's orbiting magnets. (d) a new atom is formed by incorporating all magnets.

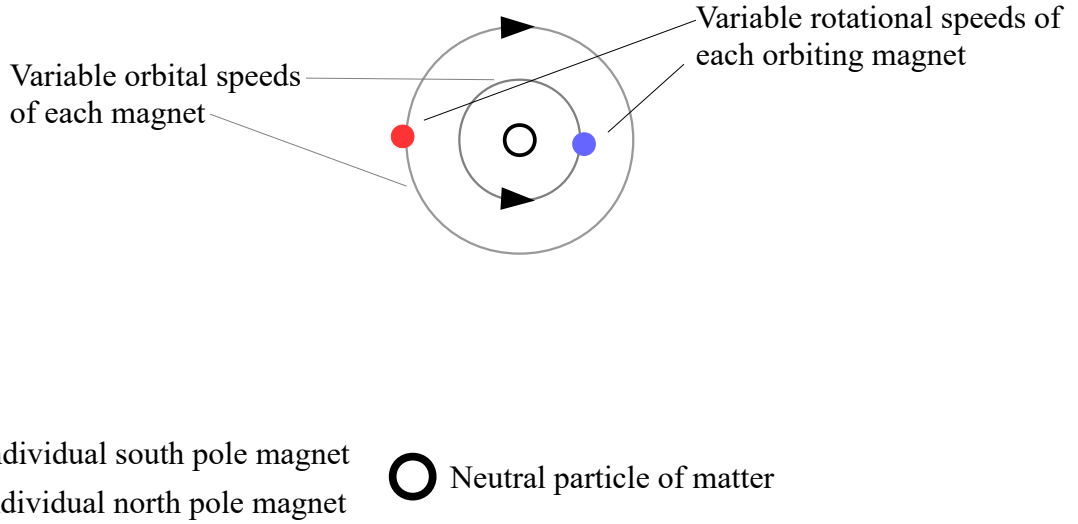
Every form of matter is a product of it's own unique combination of atoms. The factors of a combination are the number of magnets in the atom, their variable speed orbiting the common core and their variable speed of rotation within that orbit (see Fig. 6.4). The number of different combinations is infinite.



Variable orbital speeds of each magnet
Variable rotational speeds of each orbiting magnet
Individual south pole magnet
Individual north pole magnet
Neutral particle of matter

Fig. 6.4. Two magnets orbiting an atom

Very high pressure and heat in the earth's interior cause atoms to burst. When an atom bursts, the individual north and south pole magnets that orbit the common core run toward the earth's surface. The common core is no longer contained by the orbiting magnets (see fig. 6.5).

When many atoms burst at the same time in the earth's interior, the orbiting magnets pull matter toward them. As the magnets move to the earth's surface, the matter contracts. When the magnets break the earth's surface, the matter is released. This shifting and disturbance of matter triggers earthquakes.

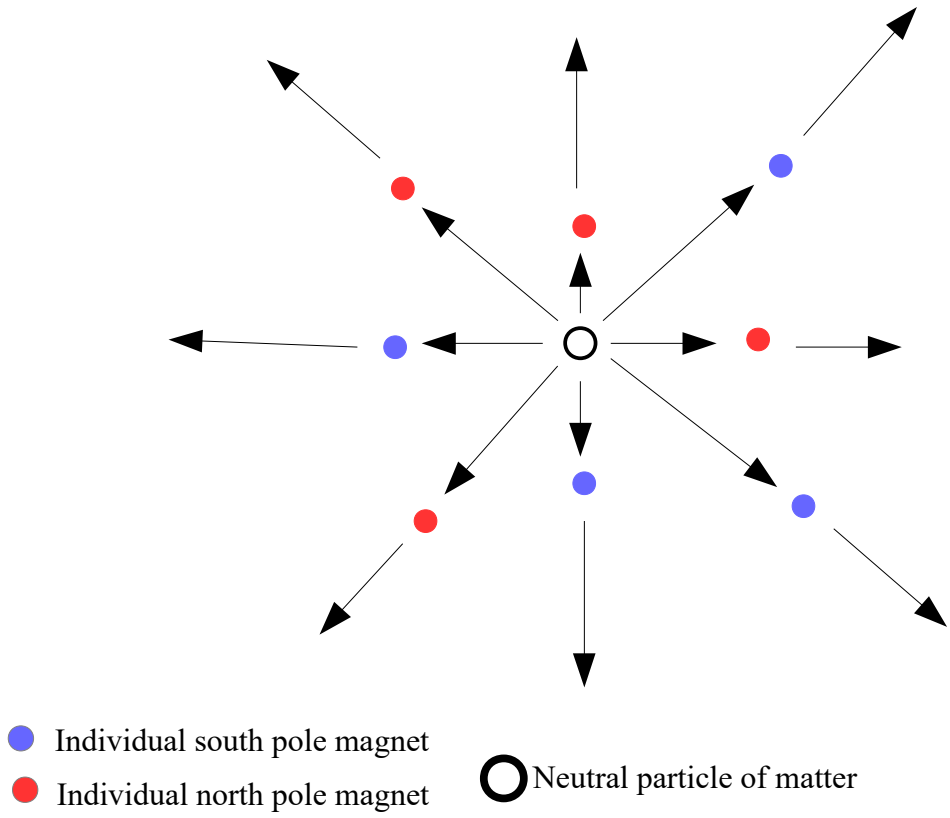


Fig. 6.5. An atom bursts. There is no attraction between magnets when running sude by side in the same directions.

Chapter 7
THE HISTORY OF GOD BASED MAGNETISM

GOD BASED MAGNETISM began at creation. This knowledge was given by GOD to man for the benefit of all mankind. Early peoples around the world understood and utilized this knowledge in medicinal practices as well as in agriculture and engineering applications (see "MAGNETS AND MUSCLES IN THE HUMAN BODY").

As men became rulers over other men, this knowledge was suppressed, when the Egyptians built the pyramids, only a few other cultures were still aware of this knowledge. Even fewer men understood this by the middle ages.

In the twentieth century, Edward Leedskalnin finished construction of Coral Castle (Homestead, Florida). He understood much of this “lost” knowledge of magnetism. By manipulating magnets from the earth's magnetic field, he magnetically altered huge stones and levitated them. A fixed device he used was similar to that used by ancient builders of monolithic monuments (see “THE MACHINE THAT BUILT THE PYRAMIDS AND CORAL CASTLE”).

Leedskalnin wrote four pamphlets on this knowledge. His writings are vague and incomprehensible. He never explained how he acquired this knowledge that he used to build Coral Castle. He did not understand the origin of this knowledge, nor did he acknowledge that the three kinds of individual particles were created by GOD. Since his death, what became of this knowledge is a mystery. 2012

THE MACHINE THAT BUILT THE PYRAMIDS AND CORAL CASTLE

FOR A BETTER UNDERSTANDING, FIRST READ "GOD BASED MAGNETISM"

MICHAEL S. GREEN 2012

The pyramids of Egypt and Coral Castle in Florida were built using the same machine (see photo #1 and #2 respectively). It is a simple machine which quarried, trimmed, transported[,] and stacked each stone into it's place. This machine was designed by the ancients to replicate the earth's magnetic field. The machine operates on the forgotten ancient laws of magnetism. The machine is so efficient it has no moving parts, is silent when operating and requires no fuel.

This machine is very basic, it is a box containing three devices. There are two four-sided 5in. squared base pyramids that are 5in. high (see photo #3). The third device is a sphere which is 5in. in diameter (see photo #4). All three devices are made of solid iron and collectively weigh 40lbs. (see photo #5). The box is constructed of solid wood and fastened with wooden pegs and glue (see photo #6). It is 3in. thick on all sides and weighs 60 lbs. Extended from the box are four iron terminals.

The three devices are installed in the box (see photo #7). The box serves as a frame supporting the three devices in a fixed "bow-tie" configuration. On either side of the iron sphere, the points of the iron pyramids are as close to the sphere as possible without touching (see photo #8).

To operate the machine, orient the box in a north/south direction (see photo #9). The box is then raised at least 3ft. high or insulated from the earth. Both pyramid terminals are connected to iron cables that extend 50ft. long, laying on the ground. An iron cable buried 8ft. into the ground connects the terminal at the bottom of the sphere to the earth. The terminal at the top of the sphere connects to an iron rod that is mounted on a wooden handle, to insulate the operator (see photo #11). Finally, secure the cover to the box (see photo# 10).

AGAIN, IT IS STRONGLY SUGGESTED THAT “GOD BASED MAGNETISM” BE READ AT THIS POINT, FOR A BETTER UNDERSTADING

Now that the machine is set-up, it can be activated. As magnets from the earth's magnetic field are attracted to the 5oft. long iron cables, they collect in the iron pyramids (see diagram A). This continues until both pyramids are saturated and can no longer accept another magnet. As the next magnet enters the pyramid base, a magnet is expelled from the pyramid's apex or point. This expelled magnet is attracted to the iron sphere and begins to orbit the sphere.

Magnetic power builds as more magnets orbit the sphere (see diagram B). Simultaneously, magnets get expelled from their orbits by centrifugal force. These expelled magnets are “caught” by a magnetically opposite pyramid and rerouted to orbit the sphere again. This allows for a continuous, steady flow of magnetic power orbiting the sphere. This produces enough power to alter the magnetic orientation of any object.

The magnetic power creates a magnetic field in and around the iron sphere (see diagram C). The top iron terminal on the sphere becomes the magnetic north pole with a positive charge. The bottom iron terminal on the sphere becomes the magnetic south pole with a negative charge. The iron rod connected to the top iron terminal of the sphere becomes an extension of the sphere's magnetic north pole. The power concentrates on the end of the iron rod until contact is made with an object, such as a stone.

In it's natural state, a stone is comprised of equal amounts of both individual north and south pole magnet. When the iron rod makes contact with a stone, the individual north pole magnets (positively charged) flow from the end of the iron rod into the stone (see diagram D [not shown in my diagram]). This creates an excess of individual north pole magnets that repel from the ground, because the northern hemisphere of the earth has a positive charge. The individual south pole magnets (negatively charged are routed through the iron rod and machine, then flow into the earth. The stone is now magnetically altered and can be easily moved (“levitated”).

The iron rod is used for trimming stones. The wooden handle has other

iron attachments; a long flat broad iron blade for quarrying and a short iron wire for detailing the stone. To disengage the machine, break the contact between the iron rod and the stone. To relocate the machine, disconnect the 50ft. iron cables from the pyramid terminals. Remove the iron pyramids from the box before removing the sphere. The earth's magnetic field will instantly magnetically re-balance the stone to it's original magnetic orientation.

It took two years to build the box (machine) pictured above. It is a replica of Edward Leedskalnin's, which was used to build Coral Castle. His box (machine) is a less ornate version of the ancient Egyptian's (see photo#1). Because the earth's magnetic field flows through the box, stringent safety precautions are required when it is operating.

Unlike the box made by man, the Ark of the Covenant is a box (machine) that is “heavenly” or with the power of GOD. Looking at this box (machine) would bring certain death, let alone touching it (1 SAMUEL 6:6-7). This box (machine) serves as GOD'S earthly throne (2 SAMUEL 6:2).

GOD BASED MAGNETISM is the foundation of all disciplines of science. The science works for non-believers as well as believers. Just as man cannot reach his full potential without GOD, science cannot reach it[']s full potential without GOD.

GOD BASED LIGHTNING

TO BETTER UNDERSTAND THE FOLLOWING MATERIAL, FIRST READ "GOD BASED MAGNETISM"

MICHAEL S. GREEN 2012

GOD created lightning. Lightning is mentioned in the Bible over twenty-five times (JOB 38: 24, 25, 35).

Lightning occurs naturally when large amounts of individual north and south pole magnets are exchanged. In the earth's northern hemisphere, individual south pole magnets travel from the earth, up the lightning bolt, toward the storm cloud. At the same time, individual north pole magnets travel from the storm cloud, down the lightning bolt., toward the earth. In the earth's southern hemisphere, this process is reversed.

It is common knowledge that a larger magnet has more power than a smaller magnet. The earth itself is the "larger" magnet, except when there are more concentrated magnets within the storm cloud, than the area of the earth beneath it has. A concentration of individual north pole magnets within the storm cloud repels the individual north pole magnets of the earth. At the same time every individual south pole magnet in the earth, is attracted to the storm cloud. Racing toward the storm cloud, some of these magnets become too concentrated in a small, tight place (within a building, tree or person, etc.). This is the only time lightning strikes, causing the magnets to be dispersed. This process helps keep the magnetic field of the earth in constant balance.

Thunder is the sound produced as the magnets enter and exit a storm cloud.

Note by the transcriber:

I have added all of Michael S. Green's literature available to me in this document which include: GOD BASED LIGHTNING, GOD BASED MAGNETISM, and THE MACHINE THAT BUILT THE PYRAMIDS AND CORAL CASTLE. Unfortunately, I do not have access to "MAGNETS AND MUSCLES IN THE HUMAN BODY" but from what I remember, the content is only him explaining: muscle contraction, nerves, and digestive system. I don't think he had any more literature on his website other than the one's listed above.

I printed the information I had off his website which at present is no longer available to access on the internet or the internet archive.

Some of the general order of the documents transcribed above have been changed or modified (such as the operation diagrams A, B, and C), but it is important to note that no meaning has been lost.
